

Software United Business Operations Platform (BOP)

BI and BPM for your IT System

Agenda

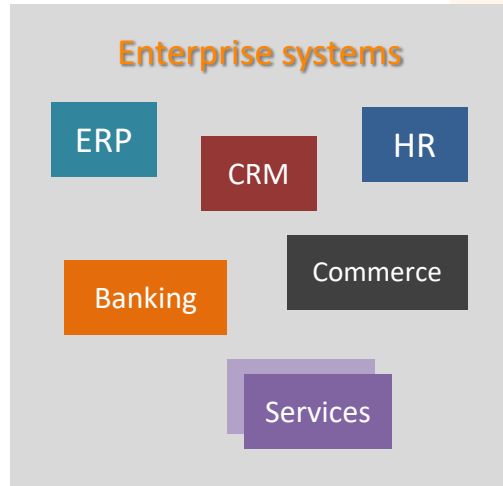

- Offer summary
- Customer positioning
- Steps to implement
- Q&A

Customer Positioning for Software United BOP

- Universal platform based on Oracle technology
- Easy connection to any existing IT system
- Easily adaptable Data and Business Process Models
- Powerful low-code tools for custom connectors and functionality

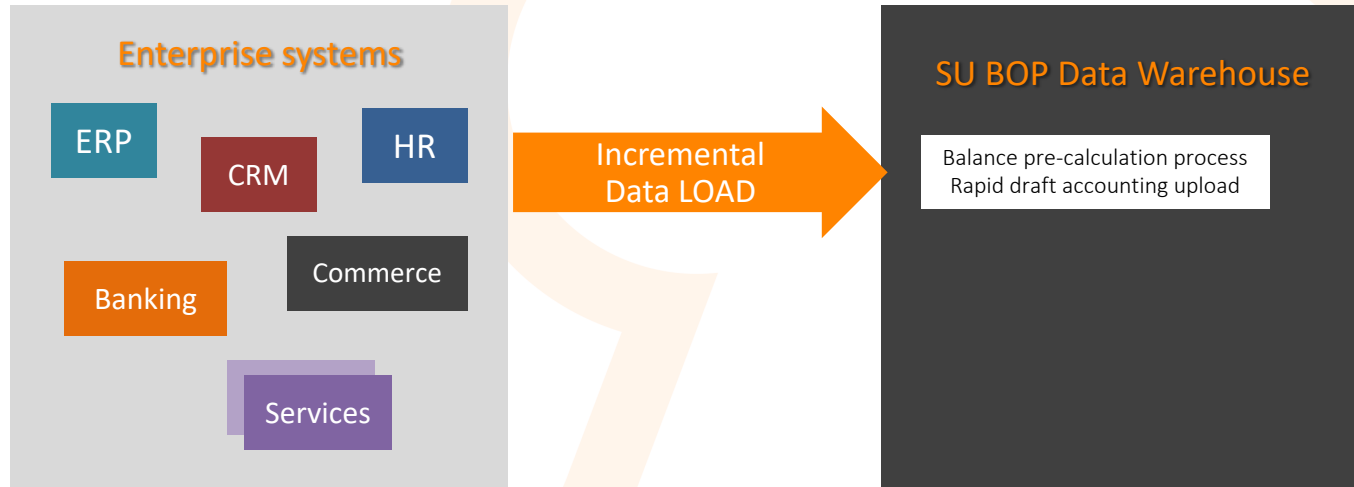

Software United BOP integration

- In the IT world today, Companies rarely have fully integrated systems
- Often these systems are heterogeneous silos sharing only a technical minimum of data, and many are built on top of different databases thus not providing full potential information

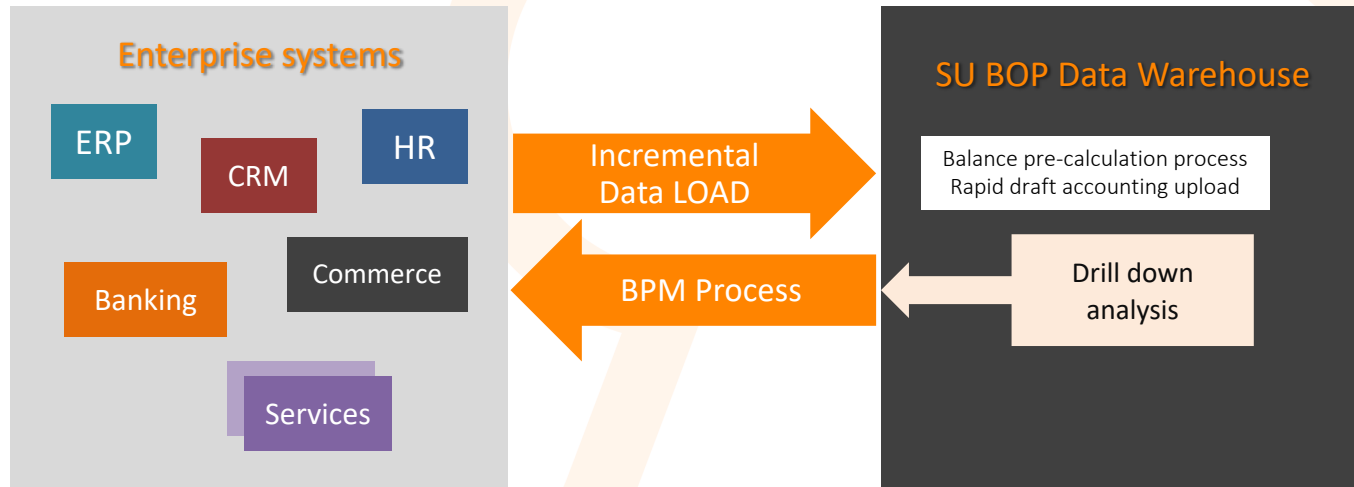

Software United BOP integration

- We recognize the potential for smart integration of data and provide out-of-the-box integrations for most common cases, using the rich functionality of the Oracle Database and Data Integrator
- When the OOTB source is an Oracle Database, highly optimized PL/SQL packages are used to extract, transform and load data changes, with minimal impact on production
- For other sources, OOTB or custom Oracle Data Integrator Knowledge Modules are used

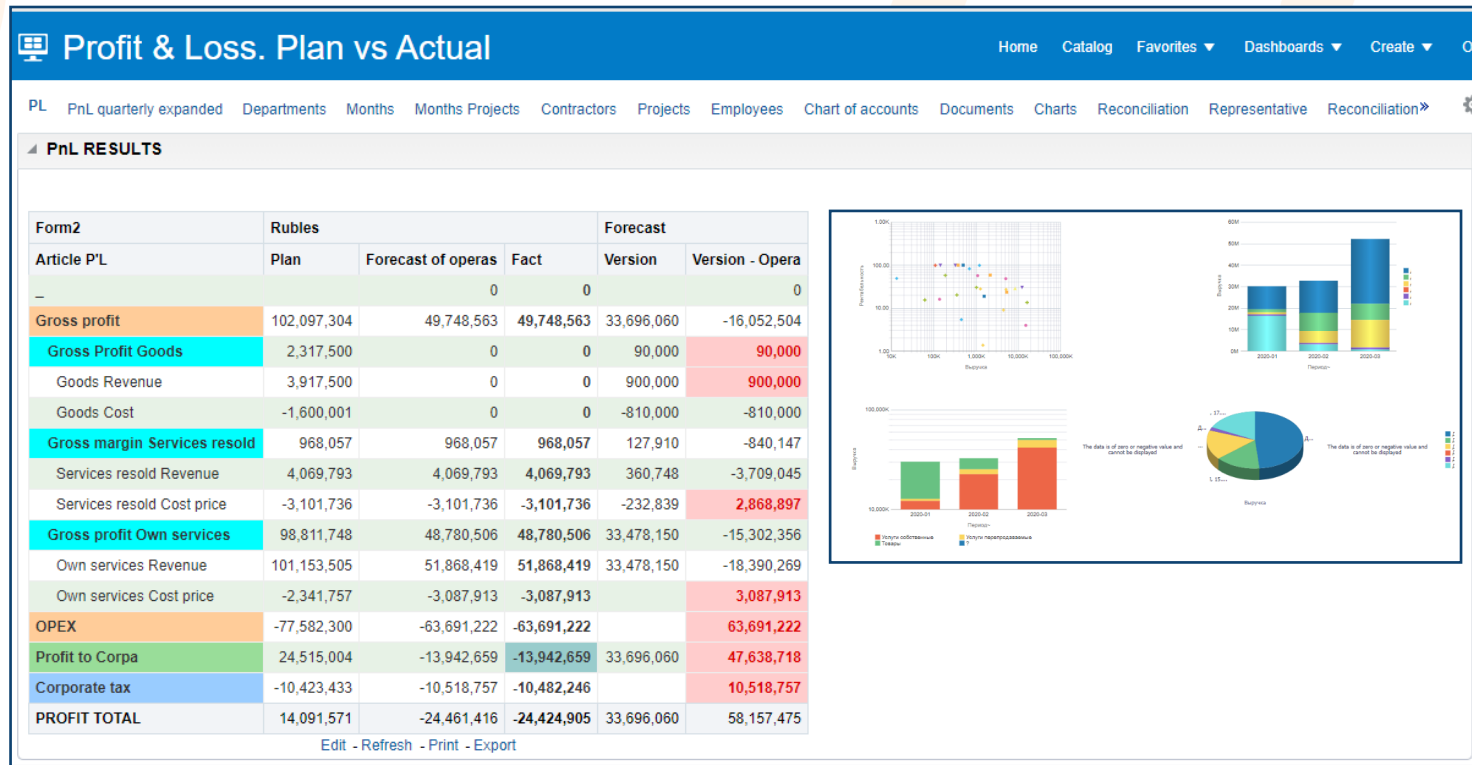

Software United BOP drill-down actions

- BPM processes can be initiated from drill-down actions in most of BOP BI analysis. These processes invoke relevant Enterprise systems pages for eventual corrective actions
- As the data in analysis can have multiple sources, the BPM process can intelligently navigate through multiple source pages

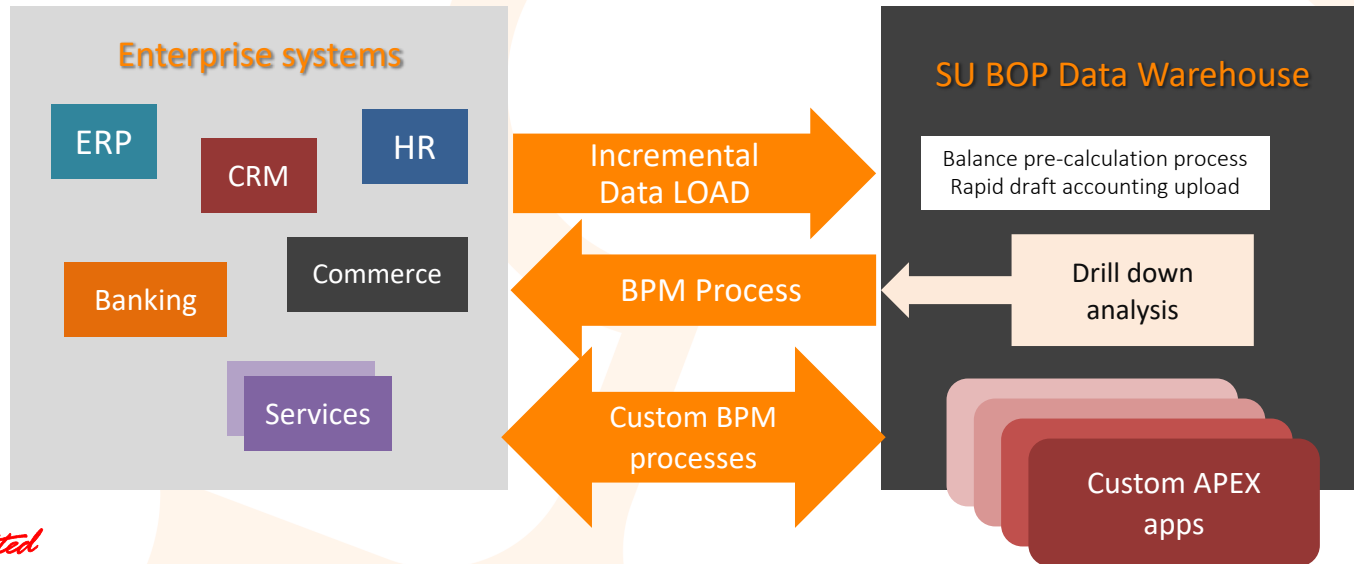

Software United BOP Dashboards Example

Profit and Loss

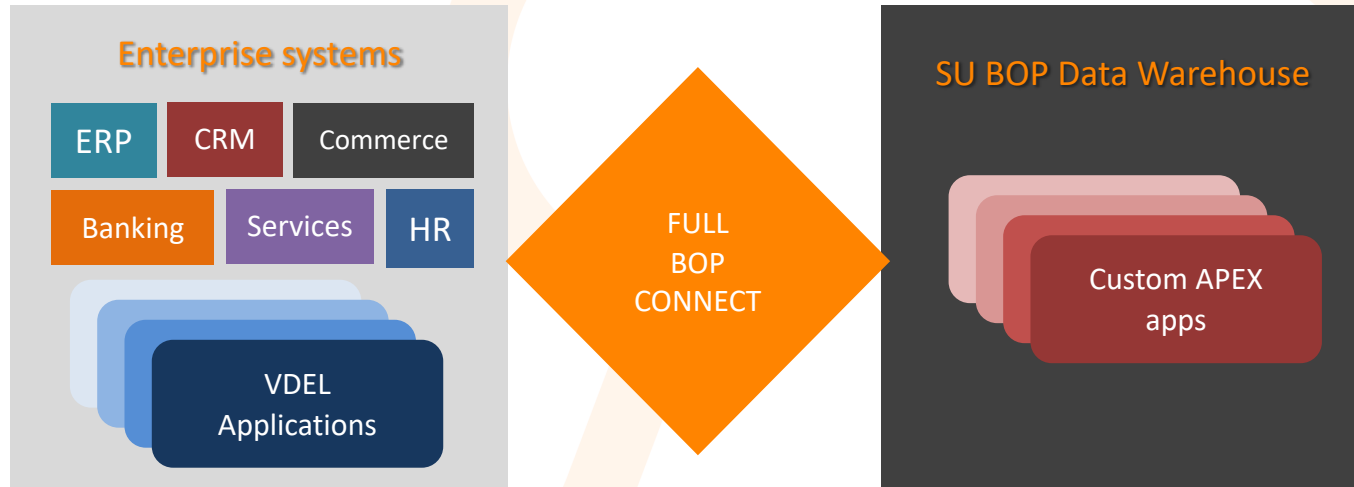

Software United BOP customization

- Typically, BOP fulfills approximately 80% of your needs with OOTB functionality.
- Most of the remaining gaps are resolved declaratively, through Master Data Management tools and tweaking exiting models and templates. Business users can be trained in a week to do this.
- For the last remaining gaps, there is no limit for what can be rapidly developed using provided powerful low-code tools. IT professionals can be trained in 1 – 3 weeks to use them.

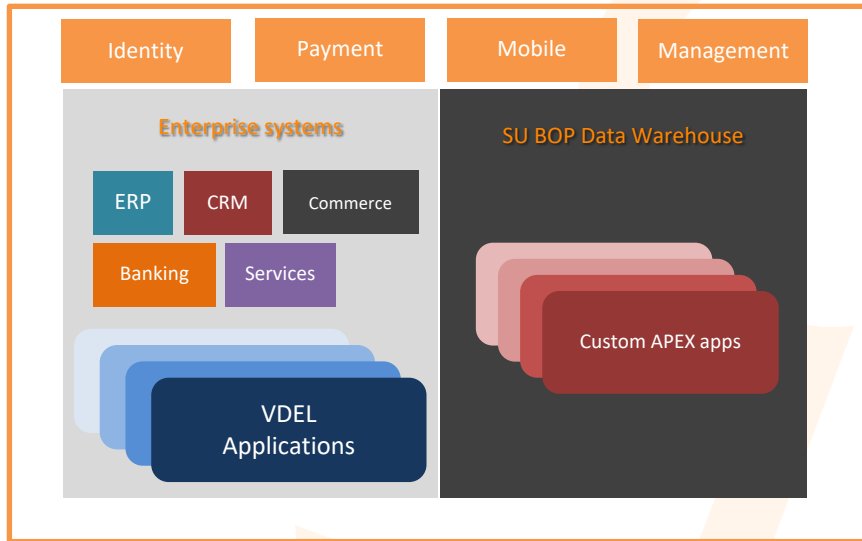

Software United BOP Additional Apps

- Once the Software United BOP is fully integrated, we can easily offer additional products from VDEL group to help even further the customer improve their IT
- In addition, we have a rich portfolio of vertical applications for various industries, all fully utilizing the SU BOP Platform capabilities

Enterprise Solution based on SU BOP

- We offer additional platform Modules such as:
 - Identity management based on job roles
 - Payment server
 - Mobile server
 - Management server
- The simplest way to achieve fully integrated, cohesive and efficient enterprise processes

Software United BOP implementation

- **Phase 1:** two to three months for training, workshops, initial setup, data migration and lite customization.
- **Phase 2:** two to three months for further workshops and moderate customization. Starting limited production and support.
- **Phase 3:** one to six months for further workshops and deep customization. Starting full production.
- Support and Maintenance with regular platform updates
